Luxury Kitchens

A Chef's kitchen at home

LUXURY KITCHENS COLLECTIONS

With ITALSTEEL LUXURY KITCHENS COLLECTIONS, the desire of many is finally realized: to enjoy satisfying culinary fantasies in a kitchen with a professional feel but a domestic taste.

Our prestigious finishes enhance its appearance, giving the entire space an atmosphere of uniqueness and warmth.

The ability to listen and perceive the needs of a modern and dynamic clientele, extensive travel, ambition, and passion to meet their ever-evolving demands have led our design team to create: ITALSTEEL LUXURY KITCHENS COLLECTIONS, an internal business unit within the company that combines the expectations of a restaurant kitchen with the attention to detail of home furnishings.

All our creations represent the perfect symbiosis between luxury and durability over time, characteristics and virtues that only stainless steel can guarantee.

VICTORIA THE IMPOSING

The distinguishing feature of this model is its imposing structure, equipped with sides and a worktop 50 mm thick.

The front is a clean line that, thanks to the groove integrated into the structure itself and welded to the rear module, allows the opening of doors and drawers without the use of a handle.

A rounded finish of the countertop is also available, aimed at facilitating cleaning and ensuring greater resistance to wear over time.

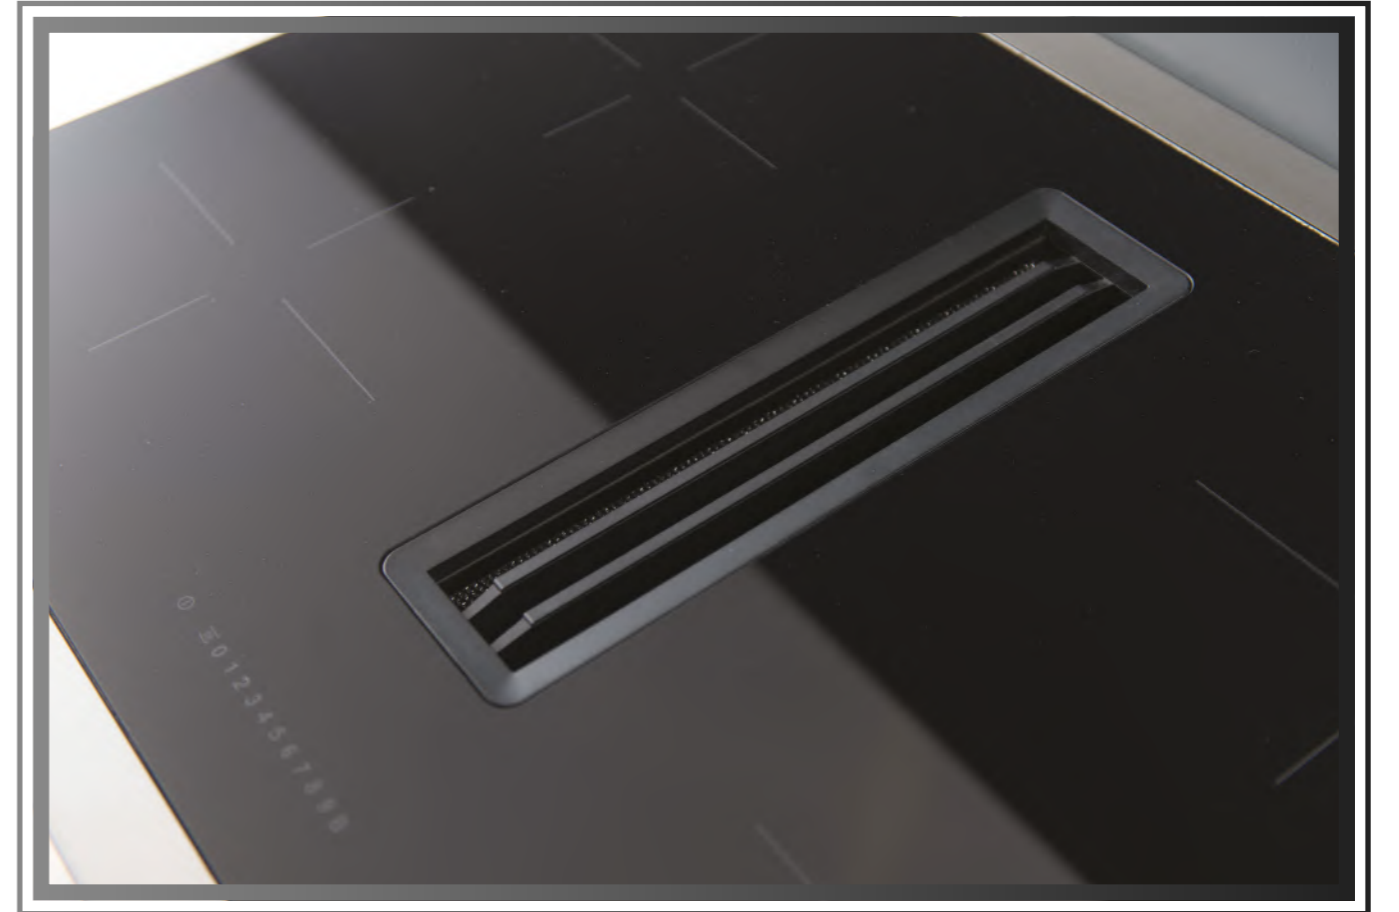

SHIBUYA MINIMALIST

The desire to present a decidedly minimalist and avant-garde kitchen distinguishes this model, with a structure minimized to the essentials, featuring suspended sides and a worktop only 20 mm thick.

The doors and drawers open through a “push to open” mechanism, combining an extremely clean design with practicality during use.

The scotch-brite finish of the satin-finished steel maximizes its elegance.

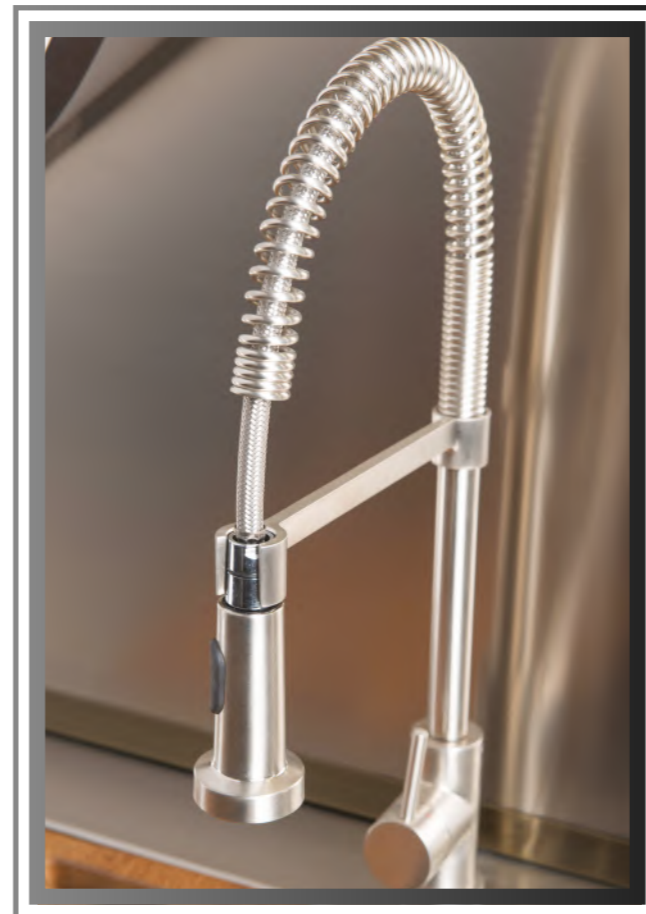

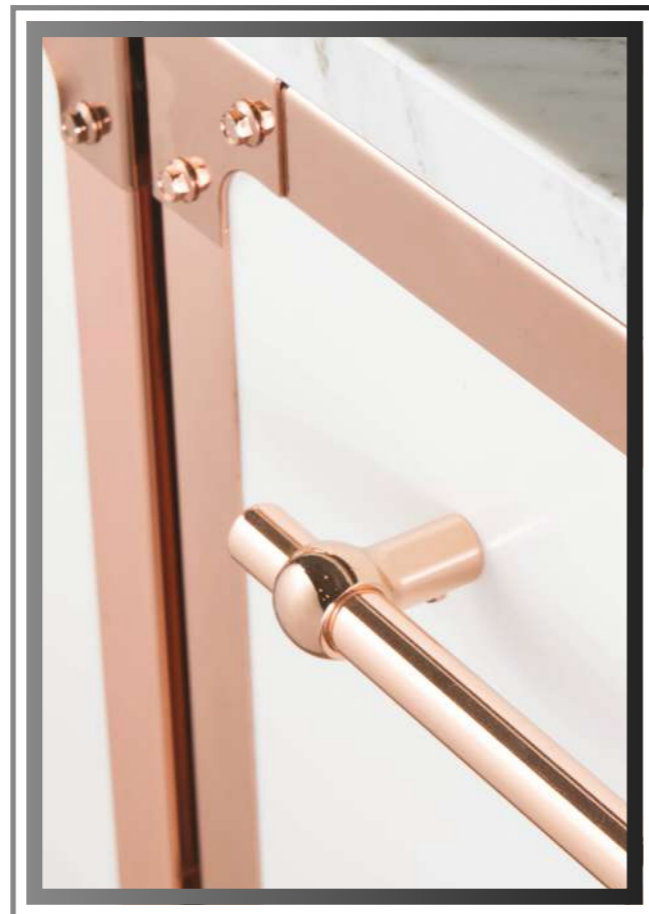

LUXOR PRECIOUS ONE

The desire to offer a precious and versatile kitchen was the driving force behind creating this model, which, thanks to its various combinations, can provide endless possibilities for customization to those who wish to make their home environment truly unique.

The substance of stainless steel is enriched by many artisanal details, such as visible handles and frames, with finishes in bronze, copper, burnished or mirror-polished, and doors that can be lacquered in glossy or matte tones.

This offers the opportunity to create a unique kitchen designed by you, for you.

WEST-END MODERN

The modern and contemporary touch, combined with prestigious finishes, characterizes our West-End.

In this kitchen as well, the doors, made of stainless steel, can be customized with glossy or matte tones and enriched with artisanal frames in bronze, copper, burnished or mirror-polished steel.

Its modernity is ensured by the clean line of the front, thanks to the groove integrated into the structure itself and welded to the rear module, allowing you to open the doors and drawers without a handle.

BELVEDERE TANGIBLE

The Custom Monobloc!

Our Belvedere is the cooking block designed and crafted to meet the specific needs of the customer, without constraints on dimensions, types of cooking, and finishes imposed by “standard” production.

This model can combine various equipment to satisfy every culinary fantasy: from induction to gas hobs, from teppanyaki plate to grill, from pasta cooker to fryer, from microwave to professional pyrolytic oven, all while maintaining the convenience of containment elements such as drawers and doors.

Each combination can be provided in both professional and domestic variants, to optimize the balance between performance and sustainability in terms of consumption.

Range Hood ITALSTEEL

CUBICA

Our Cubica hood is intentionally inspired by a decidedly professional design.

Equipped with a double-wall structure for better soundproofing and seamless welds, it is designed to integrate well into the domestic environment.

The hood features labyrinth filters, a grease collection channel, a discharge valve, a digital regulator, and LED lighting.

It comes standard with a 7/7 motor of 0.15 kW, which, when correctly installed with an outlet channel of at least 200 mm in diameter, ensures an airflow of up to 1350 cubic meters per hour.

It is also available with a set of active carbon filters as an alternative for those who cannot open a smoke outlet channel in the wall.

The hood is offered in wall-mounted or island versions with a ceiling suspension kit, with a choice between stainless steel cables or chains.

SNACK

Guided and inspired by the professional world, the Snack hood is characterized by a lowered shape that allows for installation at a reduced height from the ground. It features labyrinth filters, a grease collection channel, a discharge valve, a digital regulator, and LED lighting.

It comes standard with a 7/7 motor of 0.15 kW, which, when correctly installed with an outlet channel of at least 200 mm in diameter, ensures an airflow of up to 1350 cubic meters per hour.

It is also available with a set of active carbon filters as an alternative for those who cannot open an outlet channel in the wall.

This hood is designed for wall installation only.

SLIM

Hood characterized by a linear and modern design; the Slim is entirely made of stainless steel. It can be customized by playing with dimensions, extending to cover the entire development of the underlying furniture with the aspirating area targeted above the cooking surface.

The hood is equipped with mesh filters, speed regulator, and LED lighting.

It is available, as an option, with a set of active carbon filters for those who cannot open a smoke outlet channel externally.

This hood is offered in wall-mounted or island versions, with the option of a suspension kit with stainless steel cables or chains.

CAMPANA

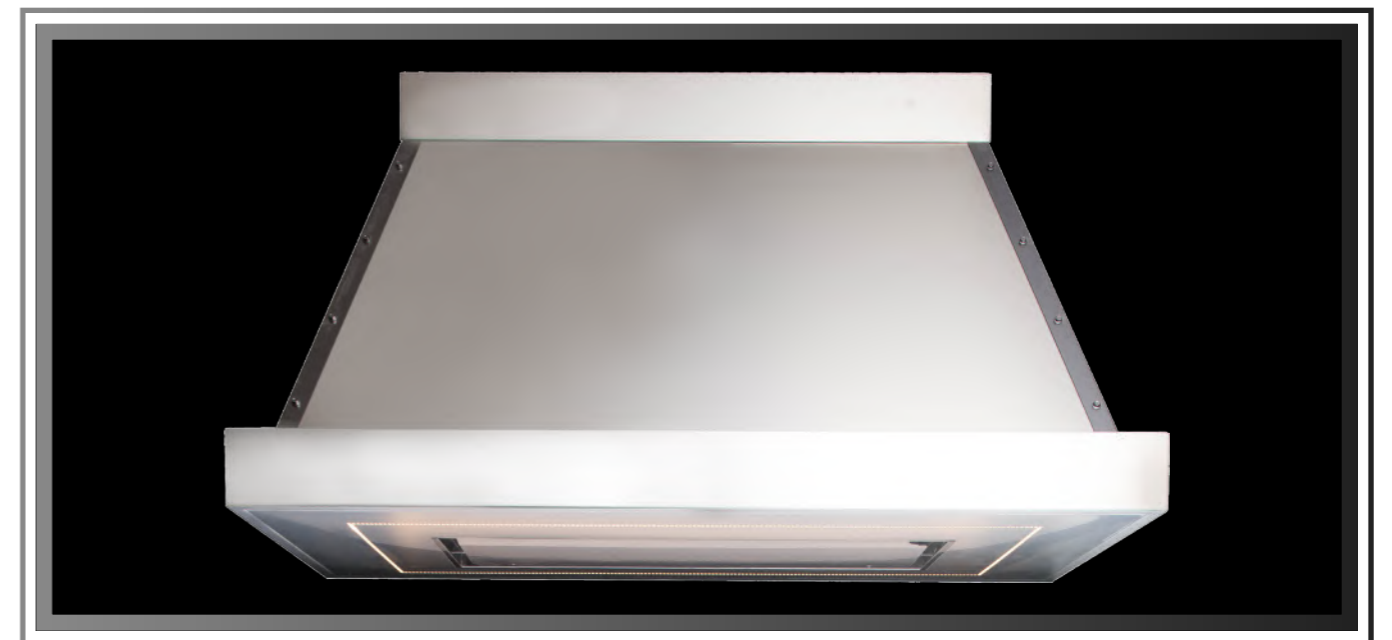

Campana is our most classic hood, intentionally enriched with artisanal details such as visible frames with finishes in bronze, copper, burnished or mirror-polished steel.

Its stainless-steel panels can be lacquered with glossy or matte tones.

It is equipped with mesh filters, a speed regulator, and LED lighting.

It is also available in the version with active carbon filters.

The hood is offered in wall-mounted or island versions, with the option of a suspension kit with stainless steel cables or chains.

Luxury Storage Solution ITALSTEEL

LUXURY STORAGE SOLUTION

All our kitchens can be enriched with our Italian column systems.

All our store solution are created reflecting the characteristics and finishes of the various collections, always respecting the storage and functional needs of the customer, who will have the opportunity to play according to orientation and taste.

Therefore, we can create total-look environments or design spaces with contrasting and original elements.

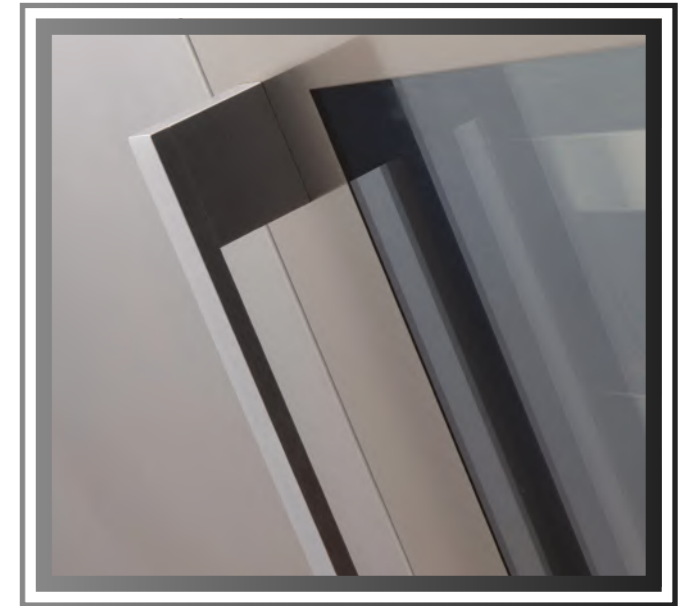

The Fridge Column is designed to accommodate built-in refrigerators, freezers, and fridge-freezers.

The Equipped Column is designed to meet various built-in needs, including traditional and/or microwave ovens, wine coolers, blast chillers, vacuum machines, warming drawers, and espresso machines.

The Pantry Column, available in different sizes, can have a single or double door and can be equipped with internally adjustable shelves or a kit for broom/vacuum cleaner storage.

The Wall Cabinets, made with the same characteristics and finishes as the various collections of our kitchens, can have one or two doors, be designed for upward-opening flaps, and include an integrated LED lighting kit on the bottom to solve the lighting issue without sacrificing aesthetics and ease of cleaning.

Accessories and Complements such as wall backrests, smooth or dish-draining wall shelves, and equipped channels are designed to enrich and complete all our kitchens.
